01 / THE SIMPLE ROUTE

Trust opens dialogue. Delivery sustains relationships.

MAKE TRUST EASY. Middle East local operating path / Executive brief

Operating proposal: Andrew Hau leads in residence. Establish locally, hire staff, and manage contracts, delivery, collections and tax. HQ provides products, technology and investment authority.

01
Products / authority
HQ agrees the product, authority and resources.

02
Local branch
Arrange entity, activities, office, bank and tax.

03
Resident team
Hire locally; retain counsel, accounting and PRO.

04
Formal dialogue
Use existing introductions to senior and business owners.

05
Business / purchasing
Choose one problem; scope, price, pilot and purchase.

06
Local execution
Contract, serve, collect, file and report progress.

Three initial HQ decisions

1. Approve local setup / operating resources and prioritize the Dubai entity / activity assessment.

2. Appoint the resident lead, signing / spending authority and staged local hiring.

3. Interview legal, accounting and PRO providers; appoint by scope, quotation and responsibilities.

02 / THE RESIDENT LEAD

What Andrew Hau brings.

CV: based in Dubai since 2024; English working language. Experience spans Cotti UAE operations, Refine Gulf advisory and Emaar developer engagement.

Resident operations

Coordinate on-site issues, suppliers and HQ.

Local access

Use four direct routes and established senior introductions.

Specialist coordination

Set PRO, legal and accounting scope, fees and progress.

Cost control

Reviews, expenses and reconciliation; HQ retains approvals.

People / training

Coordinate hiring, training and cross-functional delivery.

Commercial / contracts

Discuss business with groups / developers; counsel drafts contracts.

Product communication

Translate features into problems, demos and priceable scopes.

Bilingual coordination

Prepare materials, cross-cultural dialogue and HQ updates.

Past projects to BUBIX responsibilities

Cotti UAE operations: coordinate stores, channels, suppliers and HQ; apply this to branch operations, costs, people and client service.

Refine Gulf advisory: market entry, group access and design-to-price-to-delivery; turn BUBIX features into understandable, purchasable work packages.

Emaar engagement: developer dialogue through established introductions; prepare themes, find process owners, arrange working meetings and connect procurement.

Cotti licences, signed PRO agreement / invoice, tax acknowledgement, payroll records and reviews show the local method in use. Roles follow the CV; records describe company operations. Specialists own blockchain permissions / architecture.

03 / ENTITY AND PEOPLE

A real company, team and service presence.

Use a local branch operating model. First assess a foreign-company Branch; use a wholly owned local LLC if the licensed activity or liability structure fits better. Resident staffing, tax, payroll and delivery stay local; this is more than a mailing address.

Product / entity	Counsel / licensor confirm activity, Branch or owned LLC, and parent liability.
Parent documents	Registration, articles, resolutions, authority and identity; attest / translate as required.
Licence / office	Secure real premises, lease, registration and renewals.
Bank / accounts	Disclose ownership, beneficial owners and funds; establish close and tax calendars.
Staff / clients	Arrange lawful employment, permits, residence, insurance, payroll and vendor onboarding.

Resident roles: 3 4 5 over three years

Y1: three resident roles：Branch lead; local operations / government-service coordinator from M3; solutions engineer from M7. Two local hires beyond the lead.

Y2: four resident roles：Add local business development; HQ presales / delivery supports projects without replacing the local team.

Y3: five resident roles：Add junior analysis / client support; provide quarterly product / process training and build local handover capability.

Local contribution: jobs, wages / insurance, tax administration, local procurement and technical training. Local employment is distinct from citizen hiring; assess applicable Emiratisation rules.

L01 Dubai DET L02 MoET L05 MoHRE L11 MoHRE

04 / PROFESSIONAL SUPPORT

One lead. Three specialist roles.

The resident lead organizes the work; specialists own legal, tax and government processing.

Law firm	Entity / activities, authority, contracts, data, employment and disputes; identify regulated-activity approvals when relevant.
Accounting firm	Books, month-end, tax registration / returns, payroll and expenses; check qualifications for statutory audit or tax representation.
PRO company	Experienced government-service coordination for licences, immigration, labour and documents, with a dedicated manager and traceable case log.

PRO reference: BAK NOVA

Cotti records include a PRO agreement bearing both parties' signatures / stamps with BAK NOVA Government Transaction Centre LLC and a July 2026 service invoice. Scope lists Amer, Tasheel, MoHRE and DET work. Use it as an initial interview / quotation reference; agree BUBIX scope separately.

Turn a close relationship into service commitments

1. Retainer: dedicated owner, service list and renewal date.

2. Separate official charges, service fees and commercial introduction fees, each documented.

3. Weekly log of open cases, submissions, requested documents and next dates.

4. BUBIX controls accounts, documents and mandate scope; require full exit handover.

5. Contract government processing and business introductions separately; authorities and buyers decide approvals / procurement.

Prioritize established processing channels, long-term contacts and escalation when documents stall. Verify actual service authority at interview. Processing support does not guarantee approval or procurement.

Separate the retainer from commercial introductions. BUBIX controls accounts, files and authority. The case describes an existing service method, not an appointment already made for BUBIX.

05 / RELATIONSHIPS TO PROJECTS

After senior access, what happens next?

Lead with lasting local commitment and value, then the product. Respect the existing introduction chain and agree follow-up timing.

01 Introducer arranges access	Agree office, titles, participants, theme and disclosure.
02 One-page brief	Local company, jobs / training, one industry problem and a short demo.
03 Listen first	Understand priorities; request an accountable business contact.
04 Working team takes over	Operations, technology and procurement map systems, data, scope and budget route.
05 Actual buyer procures	Identify sponsor, user, signatory and payer; prepare a contract.
06 Local delivery and feedback	Local contracting, service, collection and filing; update the introducer.

Emaar example: acceptance / supplier records

Existing access → process owner → one acceptance workflow → discovery / bounded pilot → actual buyer → local contract and service. This is a proposed route. Al-Futtaim: aftersales / supplier coordination. Saif Belhasa: vehicle, equipment or supplier credentials. DMCC: member-company / trade-ecosystem engagement.

Apply Wasta through conduct: keep the introducer informed, deliver small promises, and report progress / local contribution. Approve hospitality under company / local rules; titles do not replace authority and public officials receive no facilitation fees.

06 / PRODUCTS AND PERMISSIONS

Define the product, then arrange permissions.

Start with enterprise software / data collaboration. Financial services, tokens, custody and exchange follow the relevant approval path.

Enterprise software / interfaces	Obtain the relevant commercial activity licence and a counsel-reviewed perimeter note. Software services and virtual-asset operations are different scopes.
Tokens, custody, exchange, financial products	Before regulated activity, identify the regulator and approval. Dubai VARA excludes DIFC; other locations require their own assessment.
Data and electronic records	Establish data rights, hosting and cross-border rules. Ledger records do not automatically establish title / government certification. Assess trust-service licensing separately.
Tax and payroll	Corporate-tax registration / filing is not waived simply for lack of profit. Tax bands use taxable income; VAT uses taxable supplies / imports and related rules. Do not mix the two AED375,000 bases.
Local recruitment / renewals	Maintain work permits, residence, insurance, wages and renewals locally; the resident lead coordinates PRO / accounting specialists.
Saudi / second market	A UAE licence does not replace Saudi investment / commercial registration, employment, tax and data requirements. Resource local operations separately before sustained delivery.

Two AED375,000 thresholds use different bases

General corporate tax: 0% on taxable income up to AED375,000; generally 9% above, subject to the applicable regime. Resident VAT registration generally tests taxable supplies / imports over the prior 12 months or expected next 30 days against AED375,000. Nonresident rules differ. Lack of profit does not remove applicable registration / filing duties.

Sequence: product-perimeter note → local legal advice → licensor confirmation → licence / contracts → production service. Saudi and other markets require their own registration, employment, tax and data arrangements.

07 / THREE-YEAR PLAN AND RESOURCES

Fund enough time to establish local operations.

Allow 12-24 months for initial development / delivery and use a three-year operating horizon. Figures below are authored product / staffing scenarios.

Y1 / Establishment, three resident roles, relationship work, two discoveries and one pilot.

Y2 / Four resident roles, production and group expansion; recurring service begins.

Y3 / Five resident roles, template reuse and service; resource major platforms separately.

Base / USD	Y1	Y2	Y3
Planned revenue	85,000	533,000	1,257,000
Fixed resources	389,400	469,400	613,000
Direct delivery / support	23,000	224,658	595,553
Pre-tax contribution	-327,400	-161,058	48,447

Y1 fixed resources plus 15% reserve: USD447,810. The USD108,848 first-quarter allowance is inside the annual amount. Peak 36-month cash gap plus 15%: USD722,558 base; USD1,075,033 with a six-month slip. Do not add reserve and liquidity twice.

Resident-engineer salary is fixed; credit matching work out of project costs. Base Y3 contributes about USD48,447, but the three-year total remains -USD440,012, before cumulative payback. Assess tax, VAT, regulatory and major-platform capital separately.

If client schedules move

Meeting slips 4-8 weeks: work another core route and reduce customization. Purchasing adds 2-3 months: hold production mobilization. Six-month slip: pause expansion and replan staff / cash quarterly while maintaining local employment, tax and renewal duties.

Planning prices: discovery USD15,000; pilot USD55,000; bounded production USD180,000; service USD3,000/month. Replace with SOWs, quotations and client calendars. The footer links to the bilingual plan / monthly model.
